

METALSISTEM

DECLARATION OF STEEL USED

METALSISTEM S.p.A. of Viale dell'Industria 2, Rovereto TN, Italy

DECLARES

that S350 GD Z100 high tensile steel, galvanised with the SENDZIMIR process and surface treated with GALVAMAG T, is used for the manufacture of its shelving.

The GALVAMAG T treatment, exclusive to Metalsistem, passivates the galvanised steel surface with a thin transparent organic coating.

While standard galvanized steels guarantee a resistance to saline mist (ECCA T8) of 75 hours, the steels used exclusively by Metalsistem are able to guarantee a 150 hour resistance to saline mist (ECCA T8) and 500 hour resistance to humid state (ASTM D2247) without alteration.

Therefore in addition to improved appearance and prolonged inalterability of the underlying galvanised surface, the Metalsistem product shine and resistance to corrosion doubles the resistance of standard galvanisation.

METALSISTEM S.p.A.
